Course Code: ITA1404

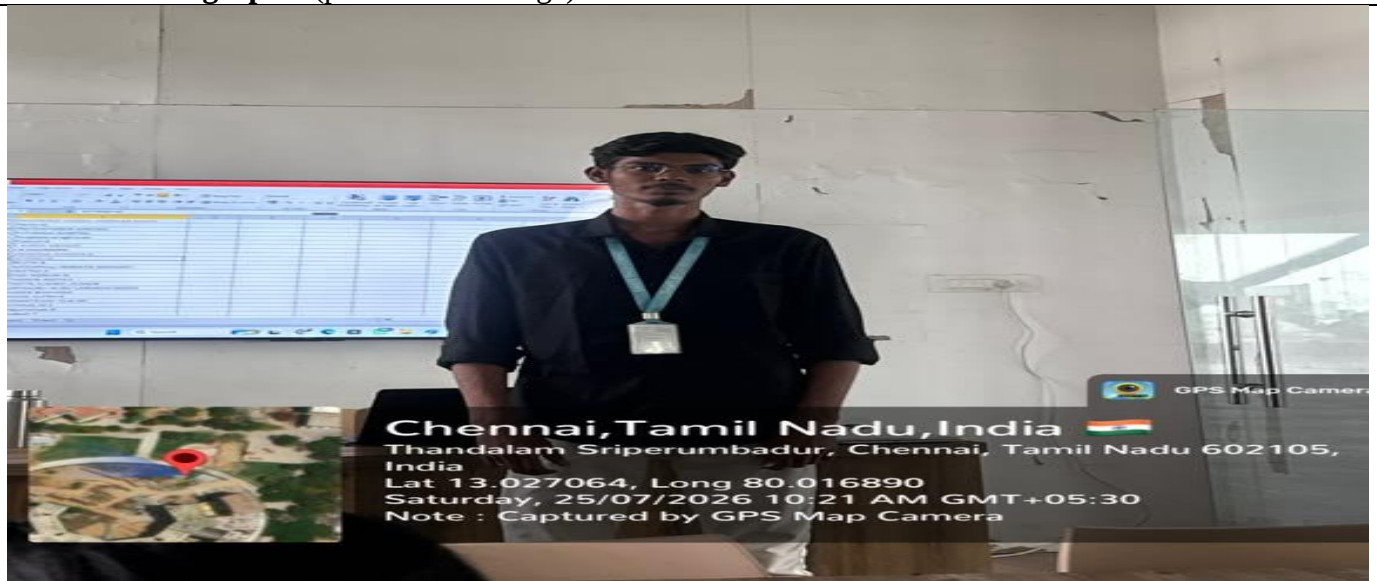

Slot: C

Course Name: Ethical hacking

Course Faculty: Dr. K Ramesh kumar

Project Title: Why Is Permission Important in Ethical Hacking?

Module Photographs: (presentation image)

Project Description: 1-min Ethical hacking debate

First, let us understand ethical hacking.

Ethical hacking means testing a computer or network with permission from the owner. Permission is the most important part of ethical hacking. Without permission, hacking is illegal.

With permission, hacking is legal.

Ethical hackers help companies find security problems.

They protect customer data and privacy.

They stop cyber attacks before they happen.

They report the problems to the company so they can fix them.

Permission also builds trust between the company and the ethical hacker.

Ethical hackers always follow ethics and the law.

They use their skills only for good purposes.

In my opinion, permission is the biggest difference between an ethical hacker and a criminal hacker.
